Online Exam Management System

An online examination system is a type of examination where examination gets their user id and password with his/her admit card. The id is already saved in the examination server. When examines login to the server, they get the profile already register. At a specific time, examine gets a message to begin the exam. The answer given by examining are saved into the server with his/her profile information.

Online Examination System Project Features :

- The online Examination System Project system must be present and secured by a password
- Online examination System project allows us to save the candidate's answer , along with the question.
- An answer checking system should be available.
- Could Update Profile.
- Log out after the over.
- Admin panel.

Goal:

The online Examination System is nonremovable Examination pattern of today's life. We need a more time-saving and more convenient examination system as the number of examines is increasing. For all students and professionals, it is essential to have some basic understanding of the online examination system.

Technology & Language:

Java GUI frameworks,swing,SWT,AWT,My SQL & Java language.
